

## 1-JDK

you need to have the JDK package installed on your computer.

You can install it following the steps of this tutorial, for Linux,

<https://www.devmedia.com.br/instalacao-e-configuracao-do-pacote-java-jdk/23749>

or searching on your browser for JDK.

## 2- Visual Studio Code

You need to have the Visual Studio Code in its latest version, for Linux environments just install from the software center.

for other operating systems, you can search for Visual Studio Code installation on your browser.

## 3-Extensão VS

It will be necessary to install the extension **Java Extension Pack**.

For this just enter in your VS and search for the icon:

or, press the keys **ctrl+shift+x**.

And search for the extension name, to ensure total functionality restart VS.

## 4-Compilação e execução do projeto.

In the end just open the project folder in VS and execute the file Hanoi.java
